

The Grey Partridge Knowledge Check

Watch the Film "Conservation Fact File 9- The Grey Partridge"
and use what you have learned to answer the following
questions.

The grey partridge can be found across northern Europe, Asia and North America- and originated in the Asian Steppes.

In the UK can be found in lowland arable areas and they live in groups of 6-15, called coveys.

Activity 1- The film you have watched describes some key grey partridge facts- write as many facts as you can in each box.

Starter Questions-

How long is a typical grey partridge?

How much does a partridge weigh?

What is the wingspan of a grey partridge?

Habitat in the UK

Nesting season and nesting habits

Preferred nest sites

Diet as an adult and also the chick's diet

Activity 2- grey partridges under threat- the film explains some of the reasons that their numbers are declining. Using the prompts below to help you write about the reasons for grey partridge decline.

Pressure to grow more food	Increased use of insecticide.	Increase of predators
Decrease in conservation managers	Removal of hedgerows	

A large, empty rectangular box with a wavy border, intended for students to write their answers to the activity.
