

Application of knowledge- The Grey Partridge

You have learned about some of the reasons for the loss of grey partridge and how we can help them survive.

Now you can apply this knowledge by creating a farm conservation management plan to encourage grey partridge to nest and rear their broods.

Vocational scenario

You are the farm manager of a medium sized mixed farm. You would like to change your cropping patterns and farming practices to encourage grey partridge to breed on the farm. Create a farm management plan to encourage the grey partridge.

Think about

- What crops would be best and when will you plant them
- What other crops could you plant to encourage partridges?
- What other conservation management techniques could you implement?
