

Boris wonders as he walks...

Which is largest?
 $6 \times 5 + 4$ or $4 \times 10 \div 2$

Boris is strolling along when he finds some money a human must have dropped when walking. I'll hand it in to the Ranger.

He says,

'There's a 50 pence, two times 20p, two times 10p, a 5p and a 2p. That's £1.07 in total.'

Is Boris correct?

Intended Learning:

- Use the multiplication (x), division (÷) and equals (=) signs to read and write mathematical statements
- Recognise and use symbols for pounds (£) and pence (p); recognise coins and notes of different values; combine amounts to make a particular value
